*) To problem-free operation of the air/water heat exchanger the quality requirements of the water must be maintained; the appropriate anti-corrosion and frost protection agents are dependent on the environment in which the unit is used and on the external chiller (VDI 3803, see also user manual).

**) At water inlet temperatures of <6 °C and >15 °C the control accuracy can no longer be guaranteed. There is also a risk of condensation if the water temperature falls short of the given limits.
